

Dog Anti Bark Collars

It acts upon four of the animal's senses. Using a remote control, a citronella spray is ejected from a device worn around the dog's neck. Simply press the button on the remote control and an inoffensive citronella spray is ejected. The spray can be triggered at a precise moment in time, so that the delay between the unacceptable behaviour and the redirection stimulus is instantaneous.

With spray collar training time is greatly reduced. After receiving a few sprays in a specific situation, the dog will attempt to avoid bad behaviour in order to spare himself another spray. The calibrated spray, causes neither pain or nasty after-effects. In fact, we have noticed that the spray has an appeasing effect on dogs. Furthermore the use of the spray is more effective to eliminate bad behaviour, than techniques, which involves fear or pain.
